

BIO ENZY

Keratolytic
Smoothing

Segment

PROFESSIONAL SKIN CARE: Keratolytic, soothing gel.
Code PD00, Vol. Tube 50 ml.

Product structure

Lightweight transparent gel.

Product characteristics

BIO ENZY: Is an innovative complex product that combines different substances capable of exerting rapid keratolytic action causing no reddening or burning sensation. The product is indicated for the treatment of hyperkeratosis in every part of the body, it can also be combined with different types of anti-aging treatment. It is also be successfully used to treat hyperpigmented skin.

Benefits

- Rapid elimination of the excessive stratum corneum thickening.
- It gives an immediate softness and smoothness sensation in skin surface.

Active substances

KERATINASE: Natural exfoliating enzyme offering keratolytic action. It rapidly eliminates dead cells of the stratum corneum.

UREA: Substance which has dual action (depending on its concentration), increases skin hydration and softens it dissolving keratin (a filamentous protein produced by keratinocytes) which is the main constituent of the cells of the stratum corneum. This helps to eliminate the excessive stratum corneum thickening and, at the same time, to maintain proper hydration of the skin.

PEELMOIST: An innovative complex product capable of degrading the corneodesmosomes, exfoliating the corneocytes on the surface of the skin. At the same time, thanks to a special molecular film, the product reduces roughness and dryness of the skin exfoliating dead skin cells. It hydrates the skin naturally.
