

# BIO PRODERM

## Face Cream

Bio-Stimulating  
Regenerating

### Segment

**HOME SKIN CARE:** Smoothing, anti-wrinkle, firming, bio-stimulating cream.  
Code D10, Vol. Small jar 50 ml.

### Product structure

Soft cream, with precious active substances and pleasant structure with no parabens, allergens-free fragrance.

### Product characteristics

**BIO-PRODERM:** Is a new generation highly active bioceutical preparation with bio-stimulating and restorative properties. The cream contains high quality biologically active substances. These substances act in different ways but synergically with one another to revitalize cell metabolism, catabolic and anabolic mechanisms are rebalanced creating ideal conditions for a strong biochemical action of a radical structural rejuvenation, combined with functional and aesthetic rejuvenation of different layers of skin tissue.

### Benefits

The skin becomes smoother, more relaxed and brightened, it Increase cell cohesion Stimulates metabolic mechanisms, tones the facemuscles, increases elasticity and skin firmness, evens out the basic skin color, strong anti-wrinkle action, the skin becomes more resistant and protected, preserves optimal hydration.

### Active substances

**AHAs-AKA (Acid- Glycolic, Pyruvic, Malic, Lactic):** Reduces thickening of the stratum corneum, increases internal epidermis thickness, reactivates cellular metabolism contributes to the renewal of the dermis, has a positive effect on many biochemical skin processes.

**MATRIXYL-6 Lipopeptide:** It smooths the skin texture and fills wrinkles in rebuilding the skin where it is needed. It effects similar to Matrikine that stimulates the synthesis of six major components of the Matrix Dermal and GDE (Junction Dermo-epidermis (collagen I, III, IV, fibronectin, hyaluronic acid and laminin-5).

**UREA:** It 'the carbamic acid amide, has strong moisturizing and emollient. Urea is naturally present on healthy skin, is a component of the natural moisturizing factor (NMF) of the epidermis. Urea promotes skin regeneration and restores the skin barrier. It improves the penetration of active layers in the sub-cutaneous.

**SERICIN:** Promotes the biological mechanisms of reconstruction and regeneration of skin tissue, improves hydration and regulates excessive evaporation of water (TEWL), increases the resistance against external agents and reinforces the skin barrier. Has film-forming and anti-elastase properties.

**SOLAR FILTERS:** Medium protection against UVA-UVB.
