

HOMEO GEN

Face Cream

Rebalancing
Moisturizing
Anti-Couperose

Segment

HOME SKIN CARE: Cream.
Code D05, Vol. Small jar 50 ml.

Product structure

Quickly absorbed high quality cream containing no parabens.
Allergen-free fragrance.

Product characteristics

HOMEO-GEN: Is a delicate cream designed for dry, chapped skin with couperose. Synergy that works to normalise the skin and influences different aspects of a problem. It strengthens capillary walls increasing the skin's resistance to harmful external aggressions. The cream decreases the skin's sensitivity to temperature jumps. Moreover, it helps the skin regain its optimal and longlasting level of moisture, either on the surface and on the deeper levels. It facilitates skin barrier restoration.

Benefits

- Makes your skin become smooth, moist and rejuvenated.
- Increases the skin's resistance to harmful external aggressions.
- Strenghtens the skin's barrier function.
- Makes skin texture smooth.
- Capillary vessels and red marks become less visible.
- Decreases the skin's sensitivity.

Active substances

DIPEPTYDE-1: Biological skin stabilizer which changes its apperance, promotes the release of beta-endorfines, facilitates the release of neurotransmitters responsible for the skin tension.

VENUCEANE: It protects the cell structure from damaging UV radiation, strengthen the skin integrity, prevents photo-aging, reduces TEWL, stimulates repair and prevention mechanisms.. It improves the keratinocyte differentiation and increases ceramide production.

HYDRAPROTECTOL-SM: Provides immediate skin moisture, improves deep moisture, strenghtens the skin's resistance barrier.

PHOSPHATYDYLOCHOLINE: The molecule composed of necessary fatty acids of physico-chemical properties resembling those of lipids of the outermost layer of the skin, stratum corneum, increases the level of skin hydration and prevents TEWL as well as disorders of the cell interchange within the stratum corneum, reinforces the activity of skin's barrier, helps to begin the epidermis repair process.

MELATONINE: An extremely potent antioxidant that helps to limit the influence of free radicals, hydroxyles and singlet oxygen. Protects the cells against harmful UV radiation, supports angiogenesis, stimulates neosynthesis of collagen and helps to retain the balance of metabolic processes.

RESWERATROL: Antioxidant and free radicals scavenger, anti-inflammatory action (inhibition of enzymes involved in mechanism of arachidonic acid action that activate the inflammatory process). It has an ability to stimulate cell proliferation and revitalize fibroblasts. It improves the neo-synthesis of collagen, inhibits proteases, protects cells from damaging UVB rays and improves microcirculation.

CERAMIDE-3: Contains a structure similar to ceramides of stratum corneum. Influences the trans-epidermal regulation of water flow, preventing its excessive loss, strenghtens the skin's barrier against harmful external aggressions, improves cell cohesion.

SUNSCREENS: Average protection against UVA-UVB radiation.
