

PERFECT C Crema

Anti-imperfection
Antioxidant
Regulates
Uniform skin discoloration

Segment

HOME: Cream for various types of skin imperfections such as: small pimples, micro-lines, non-homogeneous color, hyperpigmentation etc.
Cod. D31 - 25 ml tube

Product structure

High-quality cream with a soft and light structure spreads easily and is quickly absorbed leaving a pleasant sensation from an organoleptic point of view, without parabens with fragrance without allergens.

Features

PERFECT C: A new multifunctional bioceutic, able to intervene in a new way on the biochemical mechanisms responsible for the production of melanin, to favor an optimal fibroblastic bio-activity, and to guarantee a strong anti-oxidant action against free radicals. But PERFECT C is also able to give an immediate aesthetic improvement with a beautiful make-up effect and with an evident compactness and uniformity of the skin surface.

Benefits

AESTHETIC IMPROVEMENT

- Uniforms the complexion of the complexion.
- Immediately covers skin imperfections.
- Provides an ideal make-up based on the individual skin tone.

FUNCTIONAL IMPROVEMENT

- Extensive regularization of the biochemical mechanisms that determine production of melanin.
- Bio-protective action against free radicals.
- Promotes the bio-activity of fibroblasts .
- It gives the skin an adequate photoprotection.
- Reduces skin irritations.

Active ingredients

UNDECYLENOYL PHENYLALANINE: Performs its action as a cell receptor antagonist for MSH (MC1R). A strong regularization action on the hyperproduction of melanin and an increase in skin brightness.

ACETYL GLOSHOSAMINE: Inhibits the glycosylation process necessary to switch from inactive to active tyrosinase.

RETINALDEHYDE: Vitamin A derivatives, retinoic acid, play a role in reducing the transcription process of the tyrosinase gene.

ARBUTINE: It works by reducing the activity of tyrosinase.

SOYBEAN TRIPSPIN: Reduces the activity of PAR2 receptors that allow the entry of melanosomes into keratinocytes.

VC-IP: Improved absorption capacity, inhibits tyrosinase activity and melanogenesis Protects DNA from UV damage. It prevents the lipopredoxidation of cell membranes, improves the synthesis of collagen and its protection.

VIT PP (Nicotinamide): Improves cellular communication, stimulates microcirculation in the dermis, improves skin elasticity, reinforces barrier function. Helps to correct skin hyperpigmentation, improves tone and consistency of the skin. Helps to reduce wrinkles, promotes the normalization of acne skin.

TGP2 (Oligopeptide 34): Melanin synthesis decreases through the regulation of TRP-1, TRP-2, MITF and Tyrosinase, blocks the transfer of melanosoma from melanocyte to keratinocyte.

TGP2, has an anti-inflammatory effect thanks to the "down regulation" of TH1-type pro-inflammatory cytokines.

SOLAR FILTERS: Mix of balanced filters for medium protection.

MAGIC COLOR: Particular complex of pigments able to adapt to the different skin color of a person and guarantee a natural homogeneous make up with an optimal covering skin imperfections.

Use mode

Apply an adequate amount of cream on the face once or twice a day after proper cleansing.
