

# PROTECTOR SPF 50+ Crema

Top Level  
DNA Protector  
Anti-Oxidizing

## Segment

**HOME SKIN CARE:** Cream.  
Code S01, Vol. Tube 50 ml.

## Product structure

Lightweight, silky texture cream spreads easily and absorbs quickly leaving a pleasant sensation of softness on the skin. Paraben-free, allergen-free.

## Product characteristics

**PROTECTOR SPF 50+:** A multifunctional bioceutical preparation capable of guaranteeing high protection and providing an effective shield against UVA and UVB together with reinforcement of the skin barrier and strong antioxidant properties enabling biological protection of cell structures in the various layers of the skin. This product is suitable for all skin types including sensitive and delicate, in particular those which are at risk of hyperpigmentation. We recommend the use all year round even in winter, because it protects the skin barrier from the harsh climatic conditions even the most extreme.

## Benefits

- High protection against UVA-UVB rays. Strong protection of bio-cellular structures.
- Strong antioxidant and soothing properties. Improves the uniformity of the skin tone.
- It prevents the formation of hyperpigmented spots. Strengthens the skin barrier to protect it against harsh climatic conditions.

## Active substances

Photostability is the ability of a molecule to remain intact when exposed to solar radiation and toxicity of sunscreens. The filters are substances deliberately chosen from among those able to absorb and convert the energy of ultraviolet radiation. However, during this process a non-photostable filter undergoes structural changes which alter the filtering characteristics and the protective capacity and can determine the release of several photoproducts of degradation, which may be harmful to the skin.

**PARSOL MCX:** A chemical filter with high solubility and photostability able to screen out UVB rays reduces sunburn immediately, preventing damage to the DNA of keratinocytes and melanocytes and carcinogenesis.

**TINOSORB M:** Hybrid compound combining the properties of physical and chemical filters. It implements a new technology to protect the skin against UV rays. It is a hybrid UV absorber, the only organic UV filter produced as microfine organic particles. Tinosorb M is intrinsically photostable and offers broad spectrum protection against both harmful UVA and UVB rays.

**UNIPURE WHITE:** Titanium dioxide provides natural protection against UVA and UVB rays. The cream is safe to use and does not cause irritation. It is based on a mechanism of light reflection.

**APEROXID COMPLEX:** Synergistic blend of antioxidants provides a strong bio-protection from free radicals induced by UV rays.

**SHEA BUTTER:** It has strong emollient, moisturizing, soothing, re-epithelizing, properties which help to preserve the skin barrier.
