

# SEBA 12 Face Fluid

Normalizing Oily  
Acne Prone Skin

## Segment

**HOME SKIN CARE:** Fluid for oily skin and acne.  
Code D17, Vol. Flacon 50ml.

## Product structure

Medium-viscosity fluid, it is easily absorbed and does not contain perfume and parabens.

## Product characteristics

**SEBA 12:** Is a specific product for skin with excessive oiliness and acne. It contains selected active ingredients with bio-chemical properties complementary to one another, which normalize the excessive sebum secretions, it has antibacterial, keratolytic, soothing and sanitizing properties. These multiple activities create hygienic and functional conditions which are ideal for regression and normalization of oily skin and acne. A specific product for skin with excessive oiliness and acne.

## Benefits

It normalizes the abnormal follicular keratinization, removes blackheads, normalizes excessive sebum secretion, promotes regression of acne phenomena, has strong sanitizing properties, reduces inflammation, helps the skin to regain its integrity and functionality.

## Active substances

**SEBO-SOFT:** A compound of sodium polyacrylate and sebamic acid. The sebamic acid has similar properties to azelaic acid. It has strong antimicrobial properties and the ability to reduce the hyperkeratinization of the follicle. Sebo-soft is able to quickly lock the Propionibacterium Acnes and at the same time, prevent undesirable effects, often found in many anti-acne products such as: dehydration and skin irritation. Sebo-soft helps normalize the hydro-lipid film and helps restore a physiological surface hydration.

**A.C. NET COMPLEX:** Association of oleanolic acid and nordihydroguaiaretic acid (NDGA) in an osmotic gel. Oleanolic acid inhibits 5- $\alpha$  reductase to fight hyperseborrhoea. NDGA is a cell growth regulator that inhibits hyperkeratosis and inflammation. The osmotic gel helps to control bacterial growth.

**SALICYLIC ACID:** It acts as a keratolytic breaking selectively, the keratin protein chain present in the corneocytes. Because it has no effect on other proteins, this substance destroys and only exfoliates the horny cells, it's therefore well tolerated by cells below, without keratin. The Salicylic acid, penetrates in the inflamed lesions, where it has a desiccant and antibacterial action, it is also applicable in the acute inflammation.

**GLYCOLIC ACID:** Reduces cellular cohesion between corneocytes, restores a physiological epidermal cell turnover, prevents the formation and helps remove blackheads. **MANDELIC ACID:** Slowly penetrates into the skin, has bacteriostatic and sebostatic property at the pilosebaceous follicle level. The mandelic acid is an AHA, promotes without causing irritation and burning cell turnover and renewal of the epidermis.

**SEBOSOFT:** It helps normalize the hydro-lipid film and helps restore a physiological surface hydration.

**VIT PP:** Anti-inflammatory, antibiotic property (comparable to clindamycin but does not create antibiotic resistance), sebum regulating. It helps restore a physiological surface hydration.

**ALLANTOIN:** Defined as "cell-proliferant because it oversees the formation of epithelial tissue. It has properties: keratoplasty, emollient, soothing, antioxidant.
