

SEFFILLER®

The new age of REGENERATIVE AESTHETIC MEDICINE  
EASY - SAFE - STANDARDIZED

SEFFILLER® is designed for physicians and dermatologists who want to perform the regenerative therapy

SEFFILLER® does not require any equipment, other than the kit itself, for harvesting, preparation and grafting

The tissue obtained with SEFFILLER® needs no manipulation and is prepared in a closed sterile system

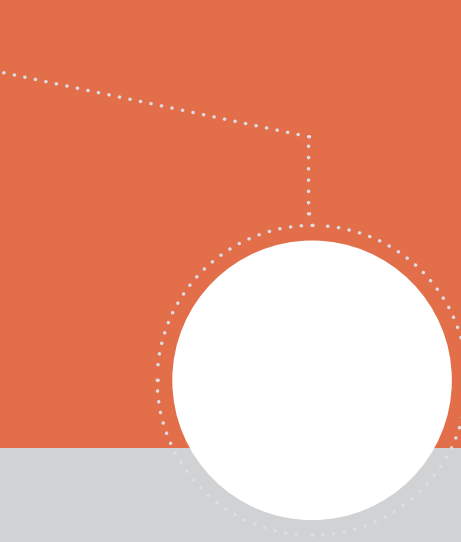

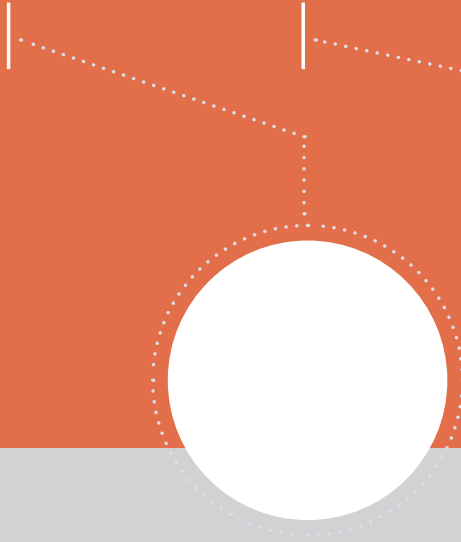

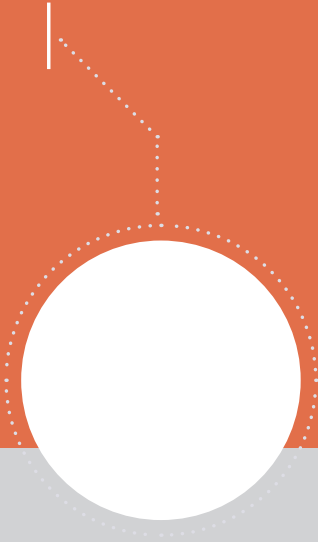

SEFFILLER® is a disposable "all-in-one" kit for guided harvesting and autologous grafting of adipose tissue and stromal fraction (SVF) containing Adipose Derived Stem Cells (ADSCs)

With SEFFILLER® the harvesting procedure is guided and hence simple, safe and standardized

the harvesting procedure of adipose tissue easy, safe and standardized, in the correct subcutaneous plane

body of the guide makes it easy to check the quantity of tissue harvested

cannula selects small cellular vascular clusters that need no further manipulation for grafting in the regenerative therapy

## SEFFILLER®

THE DISPOSABLE GUIDED SYSTEM

FOR PHYSICIANS IN AESTHETIC MEDICINE

The new age of  
REGENERATIVE AESTHETIC MEDICINE

SEFFILLER® makes it simple, easy and safe to harvest and prepare the adipose tissue and the stromal component (SVF).

The cellular vascular clusters obtained with SEFFILLER® are made of adipocytes and stromal fraction (SVF) containing adipose derived mesenchymal stem cells (ADSCs): the grafting of this tissue is indicated for the regenerative therapy of tissues.
