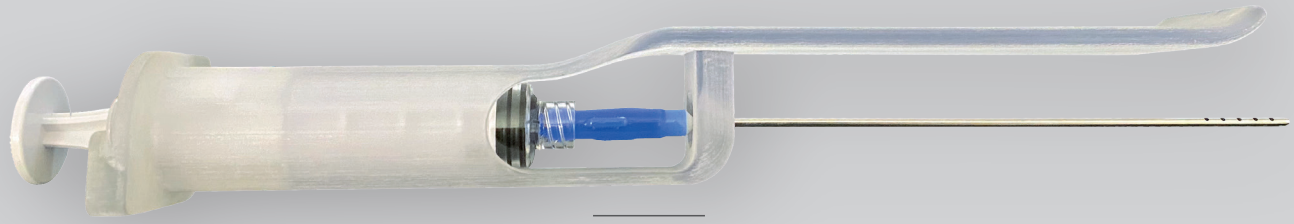
SEFFIHAIR®



The new age of
HAIR LOSS AUTOLOGOUS THERAPY

EASY - SAFE - STANDARDIZED

SEFFIHAIR® is designed to support androgenetic alopecia treatment in men and women

SEFFIHAIR® is a "all-in-one" disposable kit for the guided harvesting and autologous grafting of microfragmented adipose tissue naturally rich in Stromal Vascular Fraction (SVF) and mesenchimal stem cells (ADSCs)

SEFFIHAIR® is a "all-in-one" disposable kit to perform the procedure in an effective, simple and standardized way

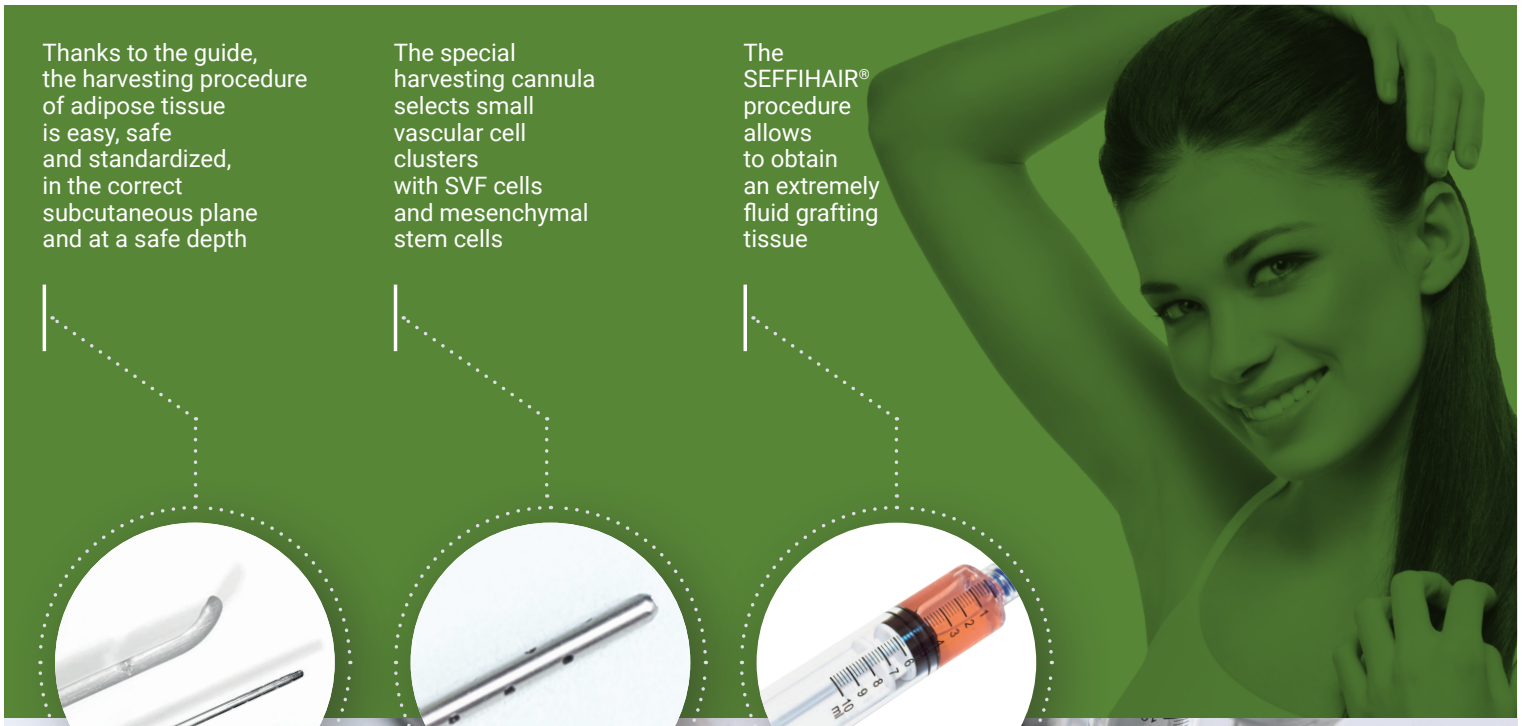
SEFFIHAIR® helps to treat male and female androgenetic alopecia through a tested protocol of advanced medicine

The tissue obtained with SEFFIHAIR® is extremely fluid and can be injected with a mini-invasive and painless procedure

Thanks to the guide, the harvesting procedure of adipose tissue is easy, safe and standardized, in the correct subcutaneous plane and at a safe depth

The special harvesting cannula selects small vascular cell clusters with SVF cells and mesenchymal stem cells

The SEFFIHAIR® procedure allows to obtain an extremely fluid grafting tissue



SEFFIHAIR®

THE DISPOSABLE GUIDED SYSTEM

FOR THE AUTOLOGOUS THERAPY OF ALOPECIA

The new age of
HAIR LOSS AUTOLOGOUS THERAPY

SEFFIHAIR® makes the harvesting and grafting of adipose tissue simple, fast and safe. This tissue is naturally rich in Stromal Vascular Fraction (SVF) and mesenchimal stem cells (ADSCs).
